THE 7 STEPS

- 1 **Open Godot** — New Project, or Import the camp's **project.godot**.
- 2 ■ **Make the character** — add **CharacterBody2D**, name it Player.
- 3 ■ **Picture + bump-shape** — add **Sprite2D** and **CollisionShape2D**.
- 4 ■ **Teach the keys** — Project ► Input Map ► **move_left, move_right, jump**.
- 5 ■ **Give her a brain** — right-click Player ► Attach Script ► paste movement code.
- 6 ■ **Add the ground** — a Level with a **StaticBody2D** floor; drag Player in.
- 7 ■ **Press ► GO** — pick Level. Arrows to walk, Space to jump. 🎮

4 WORDS

Node = one piece · **Scene** = pieces joined ·
Inspector = the knobs · **Script** = the brain.

IF IT BREAKS

Falls through floor? Both Player & floor need a bump-shape.

Won't move? Check key spelling: lowercase + underscore.

Flies away? jump_force must be **negative** (e.g. -450).

Red text below? Read line 1 — usually a name typo.

Play does nothing? Set Level as the main scene.

Colour-key bookmarks

Cut along the dashed lines. Tape one beside each laptop trackpad. 4 per page.
